Facial cleanser contg. organo-siloxane elastomer polymer particle -
giving good cleaning and no skin irritation used to remove make-up and
dirt

Abstract, (Basic): EP 295886 A

Facial cleansers contain organopolysiloxane elastomer powder.

Pref. the average particle size of the elastomer is 3-3000 microns.

The powder is spherical. The powder content is 0.5-50 wt.% of the
compsn.

USE/ADVANTAGE - The cleansers are facial scrub materials for
removal of makeup and dirt. Prior art plant-, animal- or
inorganic-powders have acute angled particles and high hardness and so
can damage the skin. Impurities in powders of natural origin can cause
spoilage and promote skin irritation. Even hard spherical organic
powders cause the sensation of a foreign material being applied to the
skin. All rigid particles only have point contact with skin giving
unsatisfactory removal of dirt.
